Confidence that your filler is the right one for you

Temporary wrinkle fillers are made of different kinds of natural or synthetic materials that are absorbed by the body. As a result, wrinkle correction usually only lasts a few months.

> Artefill is the ideal solution for those patients who do not want to return for repeat treatments with temporary fillers

You deserve Artefill . . . the lasting solution.

Ask your doctor about Artefill today.

Important Treatment Considerations

Artefill is indicated for the correction of facial wrinkles known as nasolabial folds or smile lines. Some people should not receive Artefill, including those who have a positive reaction to the Artefill collagen skin test; have a history of severe allergies manifested by a history of anaphylaxis, or history or presence of multiple severe allergies; are allergic to the anesthetic (lidocaine); have a history of allergies to any bovine collagen products; are undergoing or planning to undergo desensitization injections to meat products; are prone to thick scar formation and/or excessive scarring.

As with any injectable wrinkle filler, you can expect mild swelling and reddening at the treatment site. These side effects are usually gone within 24 hours. If you are taking aspirin or anti-inflammatory drugs you may experience increased bruising or bleeding at the injection sites. Patients with any skin outbreaks (eg. cysts, pimples, rashes, hives, infection) near the injection site should postpone treatment until they clear. The safety and effectiveness of Artefill beyond one year have not been established.

It is important that you share your medical information with your doctor. Together, you can make an informed decision as to whether Artefill is right for you.
