Integrative Dermatology of Boca Raton Selects Artefill to Meet Growing Patient Demand for a Longer Lasting Dermal Filler

Artefill Proven to Deliver Patients a Solution for Younger, Natural and Smoother Looking Skin

BOCA RATON, FL – July 13, 2009 – Laura E. Skellchock, M.D. at Integrative Dermatology has selected Artefill, the first and only FDA-approved microsphere-enhanced collagen filler for the correction of smile lines, to treat patients who are looking for a longer lasting dermal filler. Dr. Skellchock has been an avid Artefill user the past several years due to its proven success and effectiveness for the correction of wrinkles.

"It's the perfect product for patients who are experienced with fillers - it is the most enduring product we have, and it continues to improve over time. In addition to my patients, I have quite a bit of Artefill in my face, as does my significant other and also my office manager!," said Dr. Skellchock.

This simple, in-office procedure takes approximately fifteen minutes to complete. A patient is injected with Artefill similar to other dermal fillers with the key difference being its lasting effect. The unique microspheres in Artefill are not absorbed by the body and therefore provide the support the skin needs for long lasting natural feeling results. This is different from temporary dermal fillers that are made of different kinds of natural or synthetic materials that are completely absorbed by the body over time and require repeat injections to maintain wrinkle correction. A skin test is required prior to treatment or approximately four (4) weeks ahead of time, to ensure a patient is not allergic to the collagen or anesthetic in Artefill.

Artefill is only offered by a select group of physicians in Florida and is not available at all physician offices. Dr. Skellchock is one of the company trained and select few company sponsored physicians who has the skills and experience needed to administer the product.

One of Dr. Skellchock's Artefill female patients said, "I have been using different fillers for the past several years. After a while it was getting very expensive. Dr. Skellchock introduced me to Artefill and I am completely happy with the results. It has been about 6 months since she injected me and I am happier each day."

About Artefill:

Artefill is the first and only FDA-approved microsphere-enhanced collagen filler for the correction of nasolabial folds, better known as smile lines. The safety and effectiveness of Artefill has been extensively studied over the past eight years. Since Artefill was approved in 2006, over 10 thousand patients have been treated successfully with very high satisfaction rates.

Suneva Medical, Inc., a medical technology company focused on developing, manufacturing and commercializing novel, differentiated aesthetic products for the dermatology, plastic and cosmetic surgery markets, markets and manufactures Artefill. The Company was formed in April 2009 to deliver the same great product that physicians and patients have embraced over the past several years.
